DETAILED ACTION

Claim Rejections - 35 USC § 103

Claims 1-3 are rejected under 35 U.S.C. 103(a) as being unpatentable over Fujikkura JP 4-160028 in view of Le Sergent 5194714 and optionally in view of Yokota 4846867 and Fleming 4872895.

Fujikura discloses the invention, except for the plasma torches. Le Sergent disloses at col. 1, lines 15-38 that hydroxyl ions cause absorption and that plasma torches can be operated so that these problematic ions are not introduced. Yokota and Fleming are cited as showing that it is know that conventional flames will introduce hydroxyl ions (due to the hydrogen and oxygen combining in the flame) (see col. 5, lines 12-15 and col 1, lines 62-63 of Yokota and Fleming, respectively).

It would have been obvious to use plasma torches in the Fujikura method so as to provide a heating source that does not introduce any detrimental hydroxyl ions into the glass. It is noted that Applicant essentially admitted at the paragraph spanning pages 3-4 of the specification that plasma burners are known substitutes for other burners.

As to the soot being silica, it would have been obvious to use silica soot, since it is the cheapest known base material for soot-deposited preforms for optical fibers (alteratively because some soot is needed and LeSergent discloses that such is known.

Fujikura's 9 is the heating means, and 17 is the injecting means. As to the "heating area" and "vicinity", one can arbitrarily designate any areas to be the area and the vicinity. It is noted that the heating area is not defined in a way that it precludes un

Application/Control Number: 09/519,847

Art Unit: 1731

heated sections, nor is "vicinity" defined in a way that precludes heated portions. For example, the heated area can be a split (length-wise) half of the preform, and the vicinity can be the other half.

Fujikura states that "bases 7 and 15 are successively and alternately reciprocated." Therefore, there relative positions are changed (i.e. adjusted). If their relative positions were not, changed, they would have to reciprocated at exactly the same times.

As to claim 3, see figure 2 of Fujikura.

All of the rest of the limitations of claims 1-3 are clearly met.

Response to Arguments

Applicant's arguments with respect to claim 1-3 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, THIS ACTION IS MADE FINAL. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within

Art Unit: 1731

TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to John Hoffmann whose telephone number is 703-308-0469. The examiner can normally be reached on Monday through Friday, 7:00-3:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Stan Silverman can be reached on 703-308-3837. The fax phone numbers for the organization where this application or proceeding is assigned are 703-305-7115 for regular communications and 703-305-3599 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703-308-0651.
